An aldose is a monosaccharide (a simple sugar) with a carbon backbone chain with a carbonyl group on the endmost carbon atom, making it an aldehyde, and hydroxyl groups connected to all the other carbon atoms. Aldoses can be distinguished from ketoses, which have the carbonyl group away from the end of the molecule, and are therefore ketones

Phosphatidylinositol consists of a family of lipids as illustrated on the right, a class of the phosphatidylglycerides. In such molecules the isomer of the inositol group is assumed to be the myo-conformer unless otherwise stated. Typically phosphatidylinositols form a minor component on the cytosolic side of eukaryotic cell membranes. The phosphate group gives the molecules a negative charge ...

Química. O fosfatidilinositol é um fosfolípido, formado por uma glicerina (ou glicerol) unida a dois ácidos graxos, que formam um diacilglicerol, que está unido pelo OH livre da glicerina a um fosfato e este está unido ao inositol. O fosfatidilinositol é um lípido anfipático porque tem uma parte polar (o inositol e o fosfato) e uma parte apolar (o diacilglicerol).

Antecedentes históricos. El concepto de segundo mensajero surgió a partir de una observación de que la adrenalina se une a la membrana plasmática de ciertas células y aumenta el AMPc intracelular. Esto fue seguido por una serie de experimentos en los cuales se encontró que el AMPc media los efectos de varias hormonas.

Alcune proteine si sono formate per rimescolamento dei domini proteici o per la loro duplicazione all'interno della stessa proteina a causa di unioni accidentali di DNA codificante; certi domini sono particolarmente diffusi e sono perciò chiamati moduli proteici.

As proteínas podem ser encontradas numa ampla variedade de alimentos. A combinação mais adequada de fontes de proteína para cada pessoa depende da região, da acessibilidade, do custo econômico, do tipo de aminoácidos e do equilíbrio nutricional, assim como do próprio paladar.

Estructura cristalina de un homodímero de la citocromo c oxidasa bovina, incluida en la bicapa lipídica. El espacio intermembrana queda en la parte superior del esquema.

### Citocromo c oxidasa - Wikipedia, la enciclopedia libre

El citocromo c oxidasa (CcO) es una enzima que forma parte de la cadena de transporte de electrones en la membrana interna de las mitocondrias. Esta enzima es responsable de la reducción del oxígeno a agua, un proceso que libera protones al espacio intermembrana, contribuyendo al gradiente de protones que impulsa la síntesis de ATP. La estructura cristalina de un homodímero de la CcO bovina, incluida en la bicapa lipídica, muestra el espacio intermembrana en la parte superior del esquema.
