Predictive modelling uses statistics to predict outcomes. Most often the event one wants to predict is in the future, but predictive modelling can be applied to any type of unknown event, regardless of when it occurred.

Predictive modelling - Wikipedia

The paper examines the opportunities in and possibilities arising from big data in retailing, particularly along five major data dimensions—data pertaining to customers, products, time, (geo-spatial) location and channel.

The Role of Big Data and Predictive Analytics in Retailing

Gain practical insights into predictive modelling by implementing Predictive Analytics algorithms on public datasets with Python
