**UNCONVENTIONAL MACHINING PROCESS**

Abstract Necessity to use new materials, demanding functional requirements and miniaturization have led to evolution of modern manufacturing processes.

**Modern Manufacturing Processes: A Review - Journals-Sathyabama**

Laser beam machining (LBM) is a non-traditional subtractive manufacturing process, a form of machining, in which a laser is directed towards the work piece for machining. This process uses thermal energy to remove material from metallic or nonmetallic surfaces. The high frequency of monochromatic light will fall on the surface then heating, melting and vaporizing of the material take place due ...

Traditional drug products like tablets are simple, uniform, and made for a shelf-life of 2 + years. With 3D printing, pharmaceutical developers are breaking these boundaries. 3D printing can create complex products, personalized products, and products made for immediate consumption.

Plutonium is a radioactive chemical element with symbol Pu and atomic number 94. It is an actinide metal of silvery-gray appearance that tarnishes when exposed to air, and forms a dull coating when oxidized. The element normally exhibits six allotropes and four oxidation states. It reacts with carbon, halogens, nitrogen, silicon and hydrogen. When exposed to moist air, it forms oxides and ...

The main advantage of particle beam weapons is they have penetration that make lasers look like throwing a handful of thistledown. The main drawbacks of particle beam weapons is they are power hogs, they are difficult to reduced to pistol size, and Terra's atmosphere will scatter enough of the beam to give the firer a lethal dose of radiation.
